

CASE STUDY: GP Surgery, Blackpool Victoria Hospital

AN ACCESS HATCH FOR ENTRY TO THE DRAIN

Application: Healthcare

Location: Blackpool

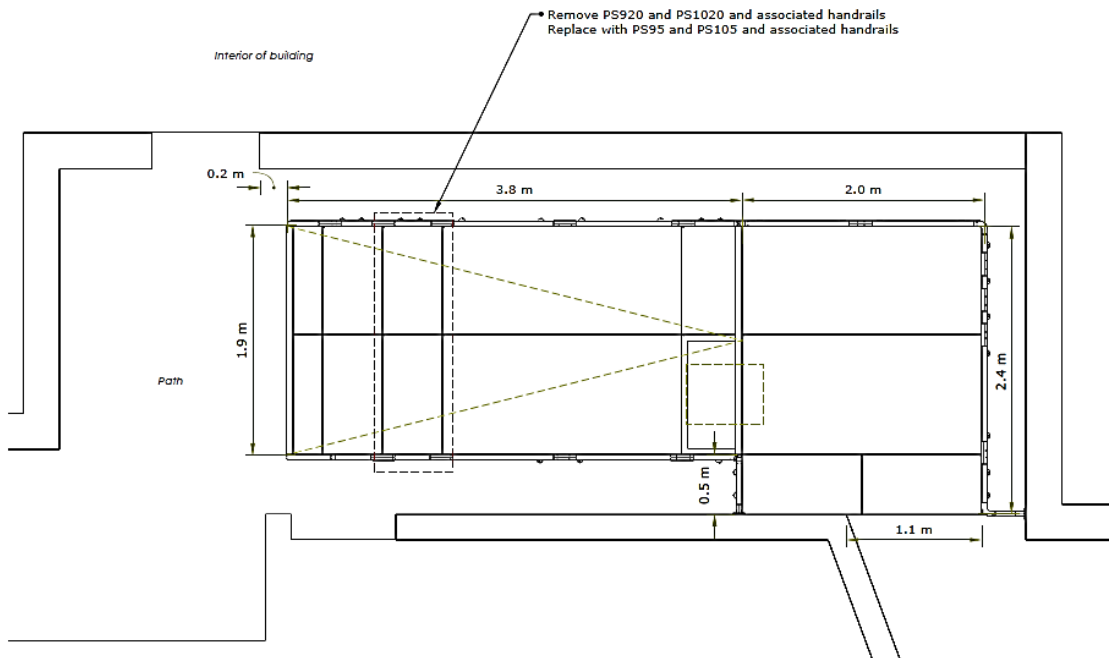

System: Fully Compliant Ramp

Service Package: Supply & Install

REQUIREMENT: A new access point to the surgery was in construction; however, a variance in the concrete levels would prevent wheeled hospital beds using this walkway.

Therefore, a modular ramp was chosen as a cost-effective way to bridge the gap.

ADDITIONAL INFORMATION: CAD and technical drawings were designed by our specialist designer in-house.

END RESULT: A fully compliant ramp with a 1:15 gradient was installed with a few hours.

The rapid installation allowed the new entrance to open within a quick turnaround time.

The ramp included an access hatch to provide entry to the drain underneath.

FEATURES INCLUDED:

- Infill Handrail - this product prevents users from climbing or falling through gaps.
- Yellow Tread - this is a safety feature designed to help those with impaired vision identify the nose of the ramp. Additionally, it helps users distinguish any level changes.
- Trombone Ends - these are added to the ends to prevent clothes catching.
- Mesh Platform - the self-draining mesh allows water to pass through rather than collect on the surface.
- Continuous Handrail - this handrail system ensures users always have support to hold onto.

EXTRA FEATURE INCLUDED:

- Access Hatch - A hatch opens allowing a person access to the underground services.
