

**Application:** Residential

**Location:** Edgware, London

**System:** Standard Ramp System

**Standard Step System**

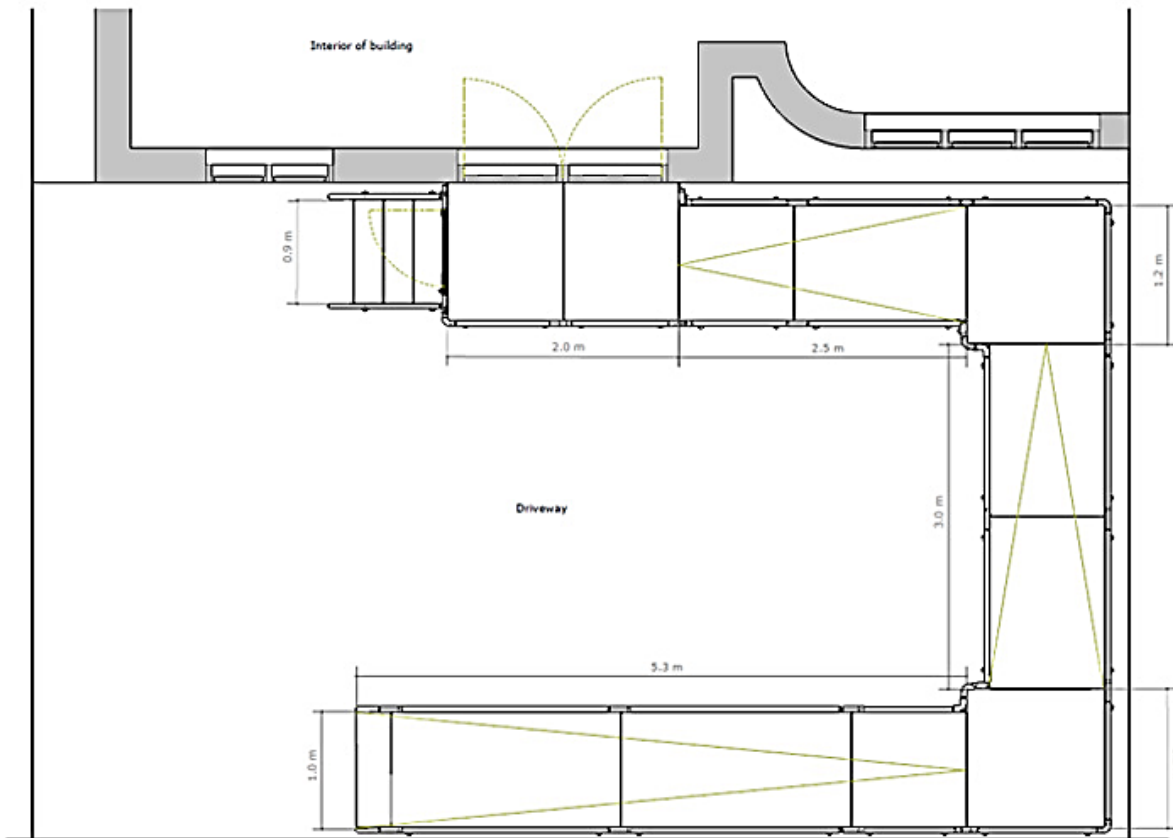

**Service Package:** Supply & Install

## CASE STUDY: Adjustable Ramp, London

**REQUIREMENT:** An adjustable access ramp capable of covering the width of the double doors. The user needed to retain their off street parking.

**ADDITIONAL INFORMATION:** CAD and technical drawings were designed by our specialist designer in-house. The drawings clearly showed the design would provide sufficient space for the end user to park their car.

**END RESULT:** A ramp with a 1:12 gradient was installed with a few hours. It included adjustable access steps for able-bodied users.

As shown, the ramp covers the complete width of the double doors.

#### FEATURES INCLUDED:

- Mesh Platform - this self-draining mesh platform allows water to pass through rather than puddle on the surface and potentially freeze.
- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate threshold heights.
- Standard Handrail - this handrail system ensures users always have a support to hold onto.
- Standard Colour Black - ramps are powder-coated black to create a hard finish that is tougher than conventional paint.

#### EXTRA FEATURE INCLUDED:

- Step Units - an ideal addition to any ramp installation, providing the access needed for able-bodied users. They can also be stand-alone units, independent of the Rapid Ramp System.
