

Application: Modular Building

Location: Flintshire, Wales

System: Standard Ramp System

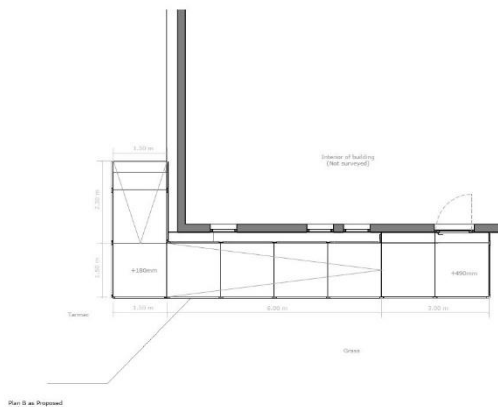

Service Package: Supply & Install

CASE STUDY: Argoed High School

DDA ALTERATIONS – SLIP-RESISTANT RAMPS FOR CLASSROOM CABINS

REQUIREMENT: The existing wooden ramps were becoming slippery in wet weather conditions; therefore, GRP (Glass Reinforced Plastic) ramps were required.

ADDITIONAL INFORMATION: CAD and technical drawings were designed by our specialist CAD designer in-house, from measurements and photos taken on-site.

END RESULT: Our team of installers dismantled the wooden ramps and replaced them with GRP metal ramps.

FEATURES INCLUDED:

- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate different threshold heights.
- Standard Continuous Handrail - this handrail system ensures the users always have support to hold onto.

EXTRA FEATURES INCLUDED:

- GRP Platform - this is a slip-resistant and non-corrosive surface, ideal for areas with high footfall, such as schools and public spaces.
- Infill Handrail - this product prevents users from climbing or falling through gaps.
- Yellow Tread - this is a safety feature designed to help those with impaired vision identify the nose of the ramp. Additionally, it helps users distinguish any level changes.
- Standard Underside Mesh - this is designed to prevent children from gaining access underneath the ramp. It is often specified for schools and public buildings.

SCHOOL INSTALLATIONS: Installations are flexible and planned around the specific needs of each project.

Often installers will work within in the holidays to accommodate around the teaching timetable.

Alternatively, installations during term time hours are just as achievable and our team are fully DBS checked (formally CRB), which covers working with children and vulnerable adults.
