

CASE STUDY: **Bexhill**

A SAFE & SIMPLE SOLUTION FOR A WEIGHTY PROBLEM

REQUIREMENT: An occupational therapist enquired about a heavy-duty wheelchair ramp capable of supporting the weight of a powerchair.

Additionally, to avoid affecting the house's future guide price, the family requested an easily removable option.

ADDITIONAL INFORMATION: We reassured the OT that a Rapid Ramp has a safe loading capacity of 1,000kgs when installed correctly, so would effectively support the weight of the powerchair.

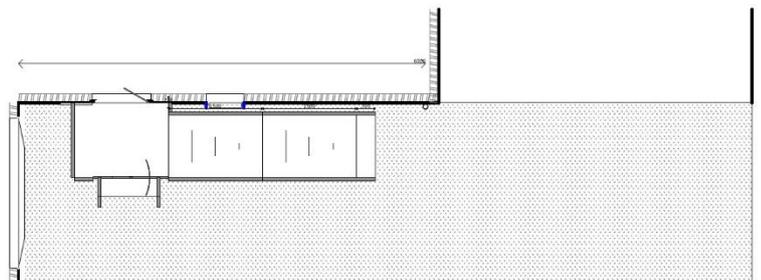

CAD and technical drawings were designed by our specialist CAD designer in-house, from measurements and photos taken by our site surveyor.

Application: Residential

Location: Bexhill, East Sussex

System: Standard Ramp System

Service Package: Supply & Install

END RESULT: Our team installed the Rapid Ramp with a step and gate unit within a few hours.

FEATURES INCLUDED:

- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate different threshold heights.
- Standard Handrail - this handrail system is designed to be grasped by the hand, to provide stability or support.
- Mesh Platform - self-draining mesh allows water to pass through rather than collect on the surface.

EXTRA FEATURE INCLUDED:

- Gate & Step Unit - an ideal addition to any ramp installation, providing the access needed for able-bodied users. They can also be stand-alone units, independent of the Rapid Ramp System.

RAMP REMOVAL: If needed in the future, this can easily be done without leaving an impact on the property.

“ It was handy that Rapid Ramp could deal with the whole process and the 3D drawing really helped me and the client. As usual, a very good job from the people at Rapid Ramp!
