

CASE STUDY: CORONAVIRUS TESTING FACILITY

QUICK WHEELCHAIR RAMPS DELIVERED WITHIN A WEEK.

REQUIREMENT: A new walk-in testing facility was in construction in a leisure centre car park.

Metal steps and ramps to the facility were needed in double quick time to allow the buildings to open.

END RESULT: Once we received the site measurements, we responded quickly and delivered the project within the week deadline.

The systems were on site on Monday and installed and ready to use by Wednesday morning.

The whole process was managed in-house from manufacturing, design, supply & Installation.

Once no longer needed, our modular systems can be dismantled and reassembled in other locations.

As a manufacturer and stockist, you will find our delivery times are much faster!

Application: Modular building

Location: Christchurch, Dorset

System: Standard Step System

Standard Modular Ramp

Service Package: Supply & Install

FEATURES INCLUDED:

EXTRA FEATURE INCLUDED:

- Mesh Platform - this self-draining mesh platform allows water to pass through rather than puddle on the surface and potentially freeze.
- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate threshold heights.
- Standard Handrail - this handrail system ensures users always have a support to hold onto.
- Standard Colour Black - ramps are powder-coated black to create a hard finish that is tougher than conventional paint.

EXTRA FEATURE INCLUDED:

- Infill Handrail on Step Unit- this product prevents users from climbing or falling through gaps.
- Yellow Tread - this is a safety feature designed to help those with impaired vision identify the nose of the ramp and helps users distinguish any level changes.
- Step Units - an ideal addition to any ramp installation, providing the access needed for able-bodied users. They can also be standalone units, independent of the Rapid Ramp System.
