

CASE STUDY: Celtic Recycling
RAMP ACCESS ACHIEVED WITHIN A SHORT LEAD TIME

REQUIREMENT: A portable office scheduled to be assembled at the recycling facility, required ramped access within a short turn-around time.

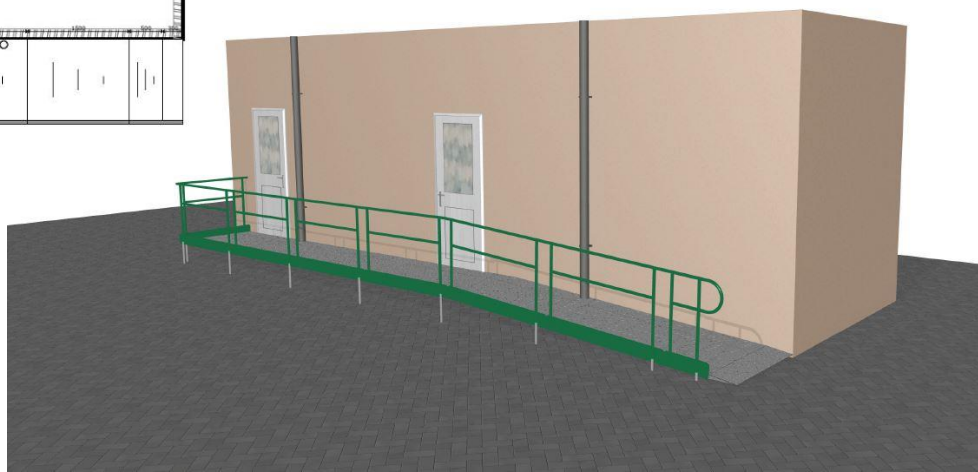

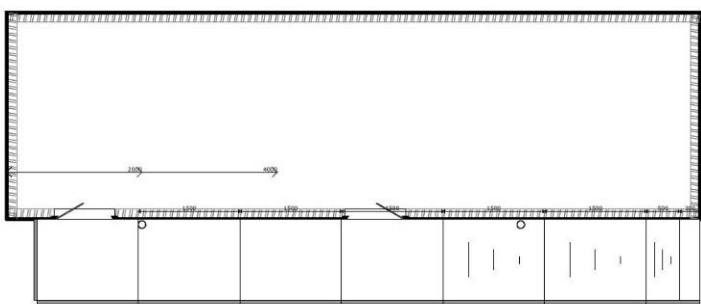

ADDITIONAL INFORMATION: CAD and technical drawings were produced from the photos and measurements supplied by the modular building company.

Application: Modular Building

Location: Newport, Wales

System: Standard Ramp System

Service Package: Supply & Install

END RESULT: We designed and installed the ramp by the deadline. Only a single handrail along one side was necessary, to prevent encroaching on the walkway.

FEATURES INCLUDED:

- Mesh Platform - self-draining mesh allows water to pass through rather than collect on the surface.
- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate different threshold heights.
- Standard Continuous Handrail - this handrail system ensures the users always have support to hold onto.

BENEFITS OF THE MODULAR RAMP:

Our system is engineered to be easy to reuse and reconfigure, with telescopic legs that can be adjusted to match different threshold heights.

Optional extras can be added such as Infill Handrails and GRP (Glass Reinforced Plastic) Platforms, plus it can fully comply with Documents M and K of the Building Regulations.

This increased level of flexibility continues to make our system ideal for portable classrooms, offices, mobile homes, and changing units.
