

## CASE STUDY: Chelmsford Waste Pipe Project

### OVERCOMING AN ACCESS CHALLENGE

**REQUIREMENT:** Temporary external pipes were scheduled to be installed above ground whilst major repairs occurred underground.

To prevent these external pipes blocking local access routes to a public park and housing estate, temporary access solutions were required.

**ADDITIONAL INFORMATION:** CAD and technical drawings were designed by our expert CAD designer in-house to the local authorities' specification.

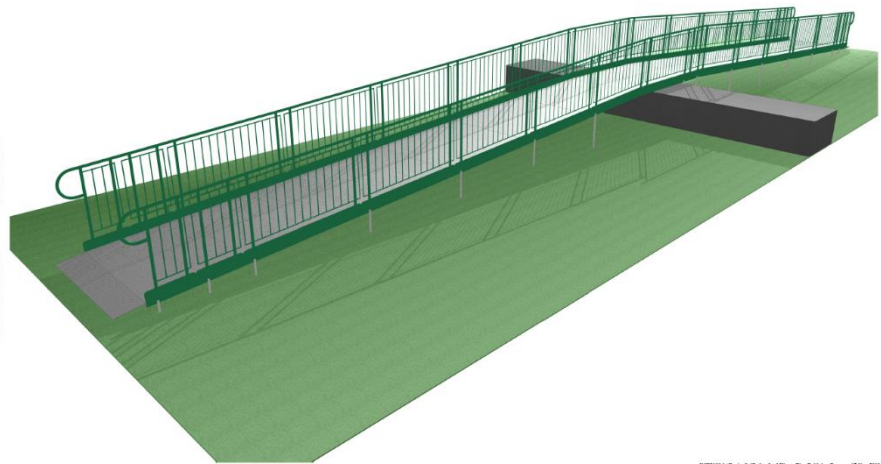

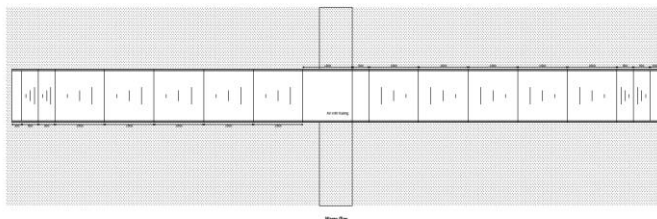

Drawings help customers to visualise how a ramp would appear in situ.

**Application:** Public Space

**Location:** Chelmsford

**System:** Standard Ramp System

**Service Package:** Rapid Rental

**END RESULT:** Three Rental Ramps were installed prior to the repairs, and the pipes were moved into place underneath.

Our modular system allowed the public access routes to stay open throughout the repairs.

Once no longer needed, the ramps were removed with ease, leaving the site in its original condition.

#### **FEATURES INCLUDED:**

- Mesh Platform - self-draining mesh allows water to pass through rather than collect on the surface.
- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate different threshold heights.
- Continuous Handrail - this handrail system ensures users always have support to hold onto.

#### **EXTRA FEATURES INCLUDED:**

- Infill Handrail - this product prevents users from climbing or falling through gaps.
- Yellow Tread - this is a safety feature designed to help those with impaired vision identify the nose of the ramp. Additionally, it helps users distinguish any level changes.
