

Application: Public Building

.....

Location: London

.....

System: Standard Ramp System

.....

Service Package: Supply & Install

.....

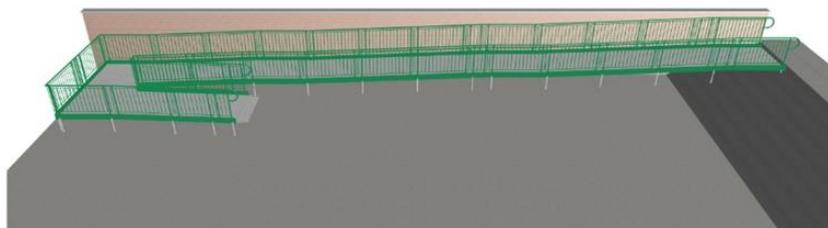

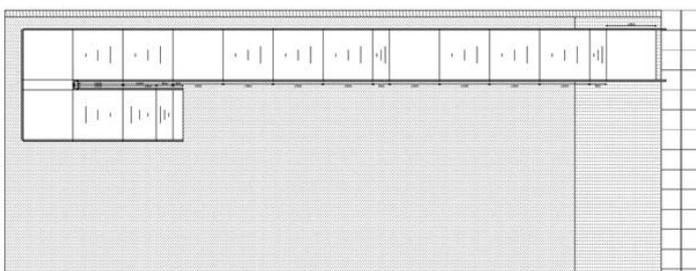

CASE STUDY: **Gildersome Street Games Area**

LET THE GAMES BEGIN! RAPID RAMP OFFERED THE MOST FLEXIBILITY

REQUIREMENT: Wheelchair access from the road to the lower games area.

ADDITIONAL INFORMATION: The client expressed how other ramps considered hadn't given the same level of flexibility that our modular system offered.

The following CAD and technical drawings were designed by our specialist CAD designer in-house, from measurements and photos taken by our site surveyor.

END RESULT: A Rapid Ramp was installed with adjustable legs to match the varying ground levels.

A handrail was also installed alongside the steps for able-bodied users.

FEATURES INCLUDED:

- Mesh Platform - self-draining mesh allows water to pass through rather than collect on the surface.
- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate different threshold heights.
- Continuous Handrail - this handrail system ensures the users always have support to hold onto.

EXTRAS FEATURES INCLUDED:

- Infill Handrail - this product prevents users from climbing or falling through gaps.
- Yellow Tread - this is a safety feature designed to help those with impaired vision identify the nose of the ramp. Additionally, it helps users distinguish any level changes.
- Standard Underside Mesh - this mesh is designed to prevent individuals from gaining access underneath the ramp. It is often specified for schools and public buildings.

TELESCOPIC LEGS:

Legs can be adjusted to accommodate different threshold heights and come in different lengths. Extra components can also be added.

Only a modular ramp system offers this level of flexibility.

Rapid Ramp delivered on time and offered the solution we were looking for.
