

CASE STUDY: **Hammersmith Hospital**

**3D CAD DRAWING GIVES ACCURATE PICTURE OF MRI UNIT**

**REQUIREMENT:** Modular access ramp to provide a 1:20 gradient to the MRI unit, allowing easy access for all users.

**ADDITIONAL INFORMATION:**  
Our specialist CAD designer created three options, with reference to the photos and measurements taken on-site. A CAD drawing was provided for each option.

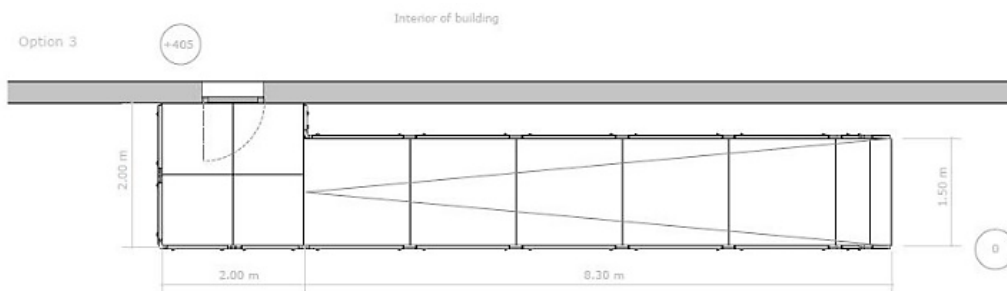

CAD & technical drawings were essential to our quoting process, because it enabled the decision-makers to visualise how each ramp option could appear in situ, before installation.

**Application:** Healthcare

**Location:** London

**System:** Standard Ramp System

**Service Package:** Supply & Install

➤ **END RESULT:** Our installers fitted a Rapid Ramp within a few hours enabling the MRI unit to open.

**FEATURES INCLUDED:**

- Trombone Ends - these are added to the ends of a Rapid Ramp to prevent clothes catching.
- Telescopic Legs - these can be adjusted to accommodate different threshold heights.
- Mesh Platform - the self-draining mesh allows water to pass through rather than collect on the surface.
- Standard Handrail - this handrail system is designed to be grasped by the hand, to provide stability or support.

**EXTRA FEATURE INCLUDED:**

- Yellow Power-Coated Finish - Rapid Ramp comes in black as standard, but you can choose a colour to match your requirement, all we require is your RAL colour number.

➤ **BENEFITS OF OUR 3D CAD DRAWINGS**

We can virtually construct sites and structures in our programme to help contextualize a project.

Also, the 3D modelling process can give architects and engineers an accurate picture of how they can change their designs if they need to. It is much easier to alter a project in the design stage rather than after the work is completed.
