

## London Stadium, Home of West Ham United

### BACKGROUND & REQUIREMENT:

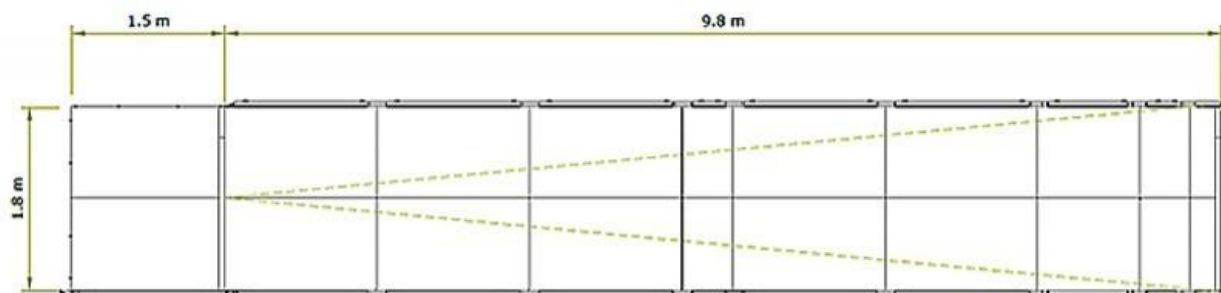

Throughout the Premier League season, the stadium needed temporary wheelchair access to its elevated spectator's platform.

Our modular ramp systems were selected over single-use wood or concrete alternatives. Unlike these materials, our ramps can be dismantled within a few hours and reused in other temporary projects, generating no waste that ends up in landfills.

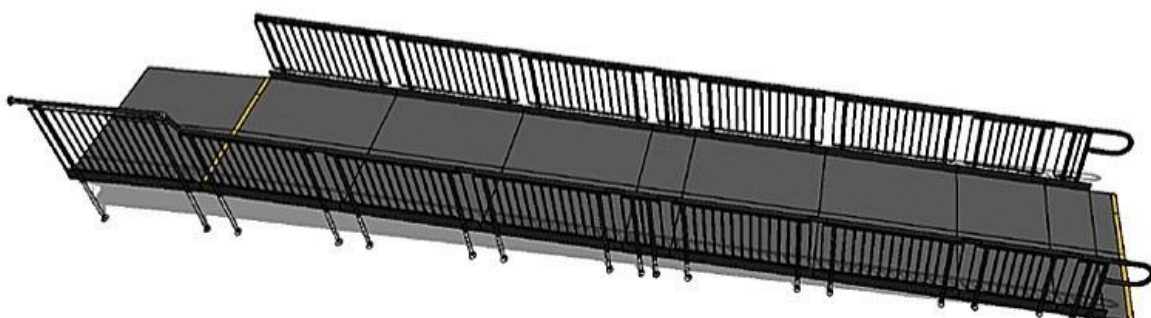

### DESIGN PHASE:

The CAD illustrations were created using details from the client's technical drawings and notes from our site surveyor, who visited the stadium to take the necessary measurements.

### END RESULT:

Our fitters installed two modular ramps with a straight configuration and GRP surface in just one day.

Each ramp is equipped with a wide platform that allows two wheelchairs to pass side by side.

Our systems are designed to support up to 1,000 kg, making them ideal for accommodating daily visitor traffic, wheelchairs, prams and mobility scooters.

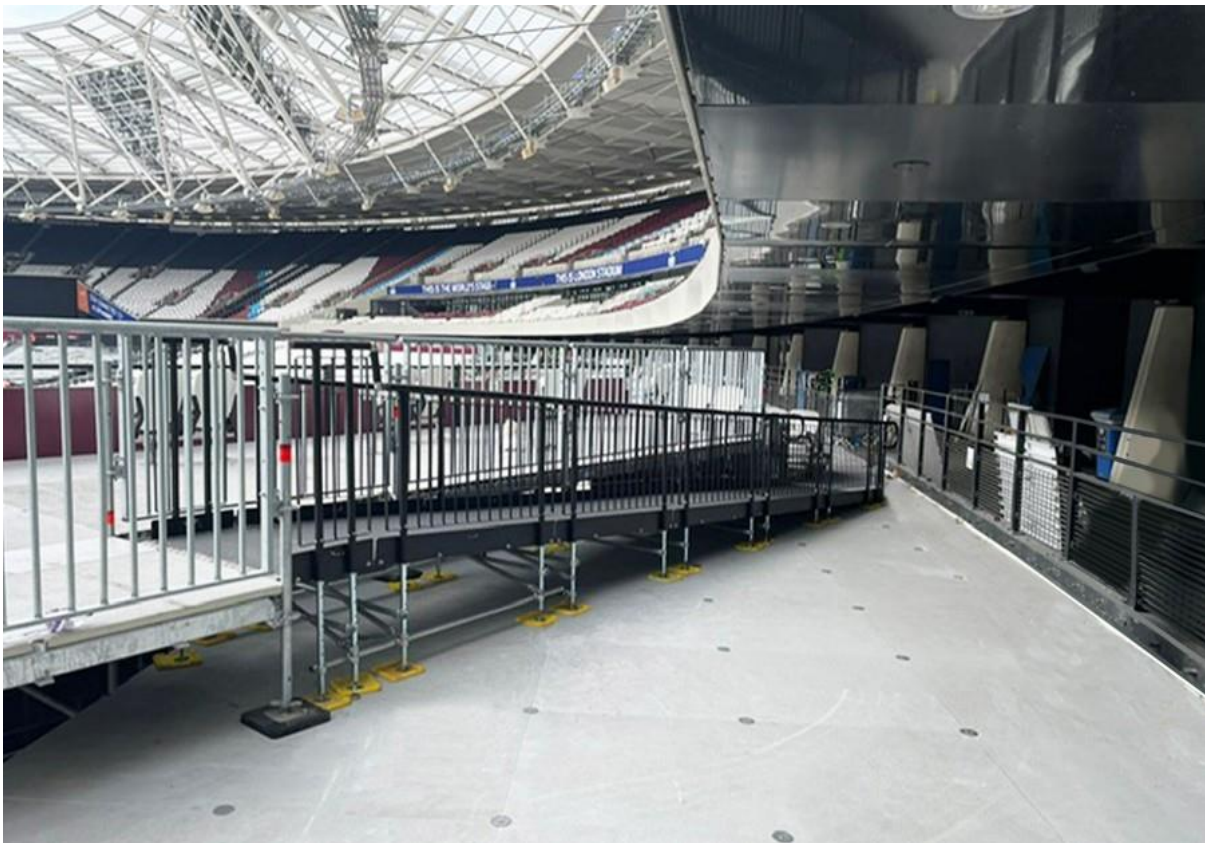

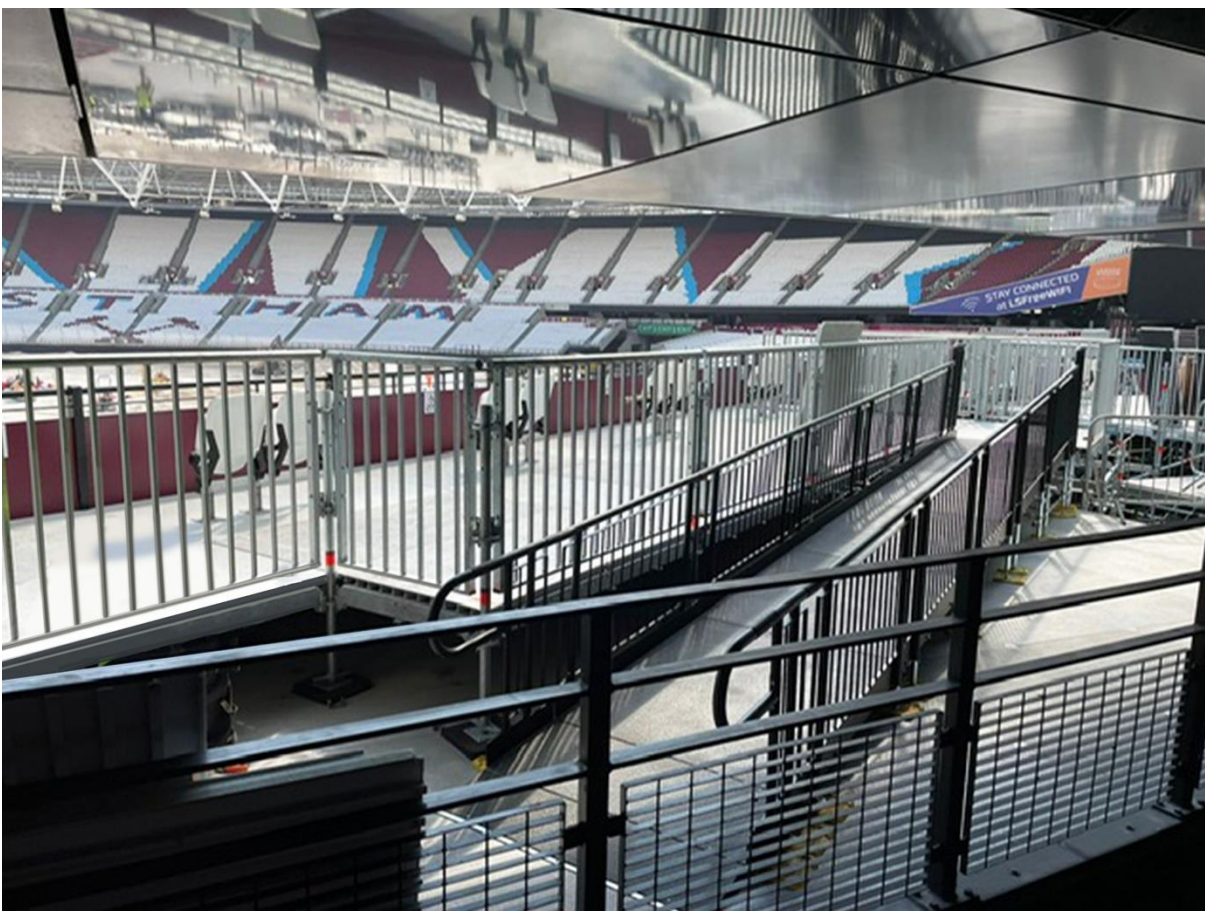

After the football season concluded, we promptly dismantled the ramps and returned the components to our rental inventory for future use in other temporary projects.

### FEATURES INCLUDED:

- Slip-resistant Mesh Platform - A multi-directional walkway with self-draining steel mesh and a galvanised finish.
- Standard Colour: Black - Powder-coated black finish for greater durability than traditional paint.
- Adjustable Telescopic Legs - Adaptable to various threshold heights.
- Looped Trombone Ends – Prevents clothes from snagging at the ends.

### EXTRA FEATURES INCLUDED:

- Slip-Resistant GRP Platforms - Made from Glass Reinforced Plastic, ideal for high-traffic areas like schools due to its slip resistance and non-corrosive properties.
- Anti-climbing Infill Handrail - Prevents users from climbing or falling through gaps.
