

Modular Office For A Car Manufacturer

REQUIREMENT:

A new modular office serves as a meeting space for production managers working away from the main office buildings.

The entrance was elevated above ground level, so our customised step unit was installed to facilitate access.

Our step system can be reconfigured and repurposed for future site changes, making it more sustainable than single-use options such as timber or concrete steps.

FEATURES INCLUDED:

- Trombone Ends - Installed at the ends to prevent clothes from snagging.
- Mesh Platform – This is a multi-directional slip-resistant walkway with self-draining steel mesh with a galvanised finish.
- Standard Handrail - This handrail system ensures that users always have a support to hold onto.
- Standard Colour: Black - Our step systems have a powder-coated black finish that is more durable than typical paint.
- Adjustable Telescopic Legs - These can be adapted to suit various threshold heights.

EXTRA FEATURES INCLUDED:

- Yellow Tread - A safety feature designed to help those with impaired vision identify the system's nose and any level changes.

APPLICATION

Commercial

LOCATION

England, UK

SYSTEM

Standard Step System
