

CASE STUDY: **University of Sussex**

REQUIREMENT: Ramp access to overcome the threshold to the portable cabin and for ease when storing away the picnic benches.

ADDITIONAL INFORMATION: Drawings were produced by our specialist designer in-house and given to the client with their quotation.

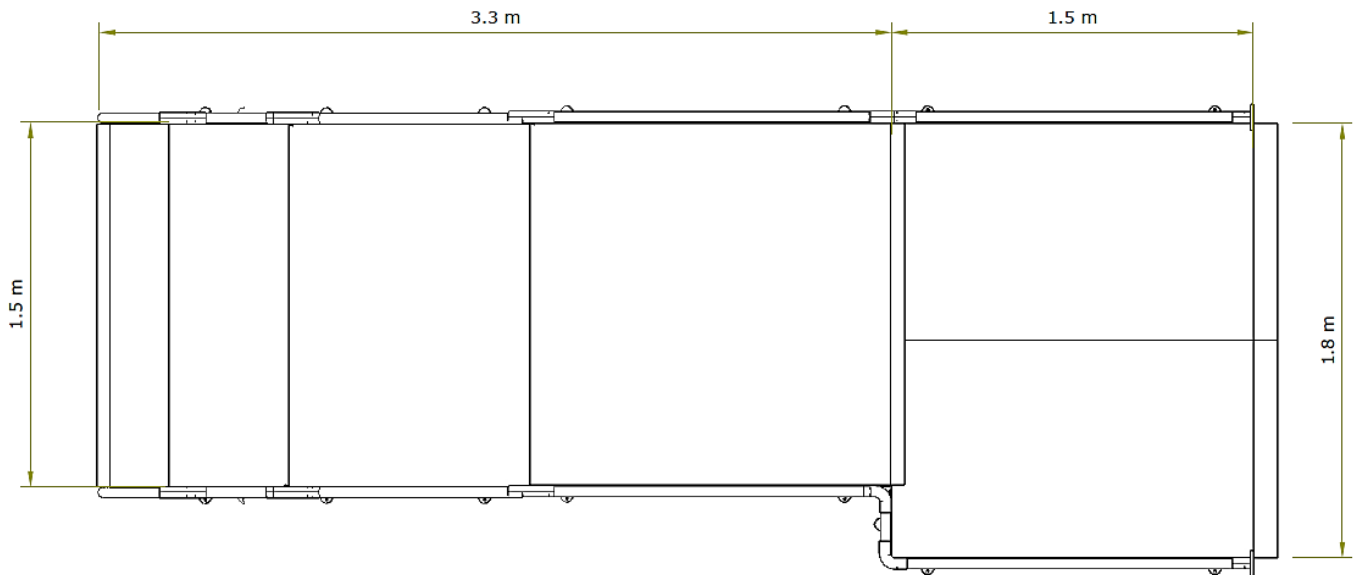

Application: Education

Location: Brighton, East Sussex

System: Fully Compliant Modular Ramp

Service Package: Supply & Install

END RESULT: Our system was ideal, having successfully been tested to have a safe loading capacity of 1,000kgs. Therefore, the platform can easily and safely support the weight of any pedestrians and benches.

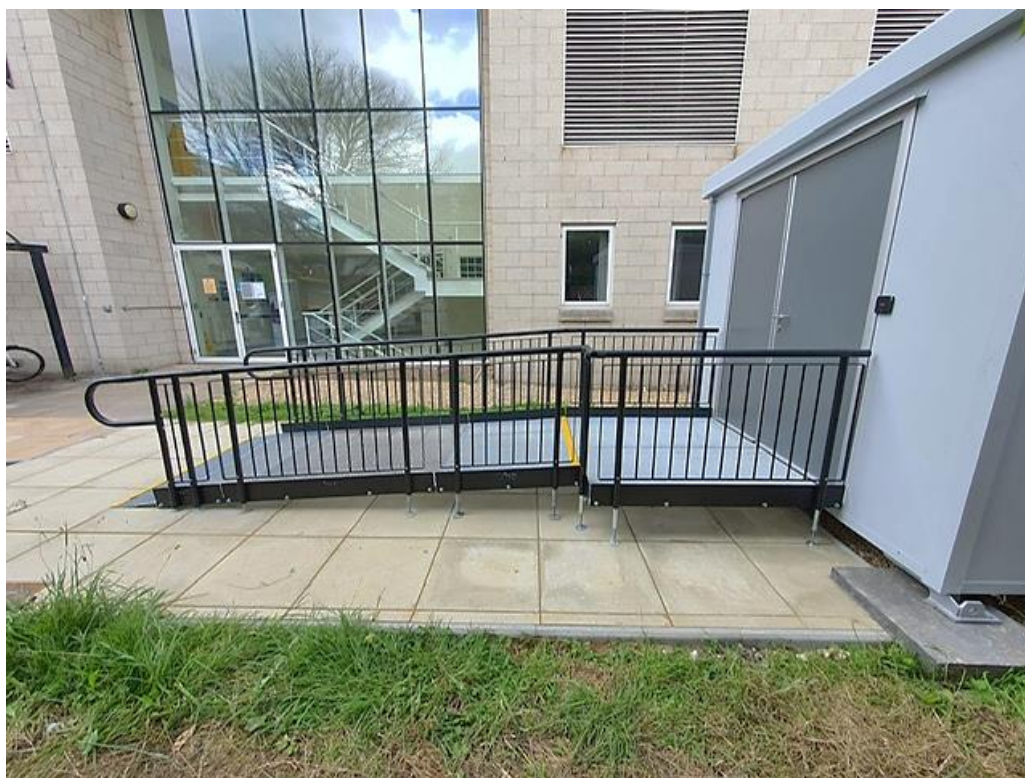

The system took two hours to fit and was immediately functional after installation (unlike a concrete ramp that requires drying time).

The ramp feet were fixed down to provide extra rigidity.

FEATURES INCLUDED:

- Infill Handrail - this product prevents users from climbing or falling through gaps.
- Yellow Tread - this is a safety feature designed to help those with impaired vision identify the nose of the ramp and steps and distinguish any level changes. Yellow is also one of the easiest colours to see because of its ability to reflect light.
- Mesh Platform - the self-draining mesh allows water to pass through rather than collect on the surface.
- Rest Platform – a rest platform at 5 metres is required to allow the user to pause.
- 1100mm High Rail – these handrails attach to any level sections.
- Continuous Handrail - this handrail system ensures users always have support to hold onto.
- Standard Colour: Black - Ramps are powder coated black to create a durable finish that is tougher than conventional paint.
